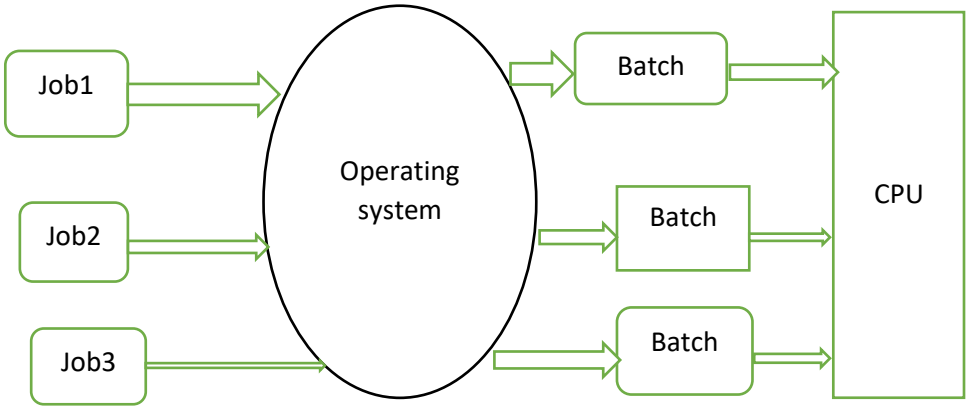
Roll- 05

Q1. Explain batch OS and state its advantages and disadvantages

ANS:- In early days computer work was given on punch cards and then this punch cards behave as input to the computer. These jobs or batch jobs were than executed by the computer one by one. So that computers were called as batch systems. The work done by batch systems are in parts i.e. one job is processed than other job in the queue is processed and so on



<u>Advantages of Batch Operating System:-</u>

Here are some advantages of batch system:

1. *Repeated jobs are done fast in batch systems without user interaction.*
2. *You don't need special hardware and system support to input data in batch systems.*
3. *Best for large organizations but small organizations can also benefit from it.*
4. *Batch system can work offline so it makes less stress on processor.*
5. *Sharing of batch system for multiple users.*

<u>Disadvantages of batch Systems:-</u>

1. *Computer operators must be trained for using batch systems.*
2. *It is difficult to debug batch systems.*
3. *Batch systems are sometime costly.*
4. *If some job takes too much time i.e. if error occurs in job then other jobs will wait for unknown time.*

Q2. Explain OS and its essential features.

ANS:- *An operating System is a software that acts as an interface between computer hardware components and the users. Every computer system must have at least one operating system to run other programs. Applications like browsers, MS Office, Notepad Games, etc., need some environment to run and perform its tasks.*

The OS helps you to communicate with the computer without knowing how to speak the computers language. It is not possible for the user to use any computer or mobile device without having an operating system.

<u>Features of Operating System:-</u>

- *Protected and supervisor mode*
- *Allows disk access and file system device driver networking security*
- *Program execution*
- *Memory management virtual memory*
- *Multitasking*
